PROJECTS

Invoice Generation Website & Application (08/2023 - Present)

This project aims to create a user-friendly website and application for generating invoices for a medical store. The system will be developed using **HTML, CSS, and JavaScript** for the front-end, and **Google Apps Script** will be used for the back-end database management and invoice generation.

Attendance Applications (06/2023 - 08/2023) [🔗](#)

Creating an attendance app using **Java, XML, and Firebase** for authentication and **SQL** for the database. An attendance app is like a digital attendance book. It helps teachers or organizers keep track of who's present and who's not at events, like classes or meetings. Imagine it as a virtual version of a teacher's attendance register.

College Application (02/2023 - 06/2023) [🔗](#)

Creating a college app with **Java, XML, and Firebase** for database management that includes student profiles, teacher profiles, attendance tracking, notices, images, and teacher interactions involves several complex features.

Prayagraj Tourist Website (10/2022 - 12/2022) [🔗](#)

Creating a website for Prayagraj tourists using **HTML, CSS, and Bootstrap** involves designing an appealing and user-friendly interface to provide essential information to travelers.
